

DAY 6 - DEPLOYMENT PREPARATION AND STAGING - MORENT CAR RENTAL WEBSITE

Rental E-Commerce Website

Staging Morent - Way to rent car

Steps:

- 1. I created a new branch and pushed my project code inside it
vercel created a preview for that deployment and my website was live on preview.
- 2. I took the link that was given from vercel for that preview deployment and went to google developer console to add the link as a authorized url so that i can login to my website.
- 3. I went to sanity api section and added the same preview link inside the cors origin so that i can use CRUD operations with getting CORS errors.
- 4. I Start testing my website.
- 5. I went to chrome lighthouse and start start testing the performance of my individual pages one by one and captured the screenshot of the performance and saved them inside the documents.
- 6. I used my own website as a user from start till end, i tested every thing for example filters, searches, advance searches, data fetching, categories filters, etc.
- 7. I create a csv file in excel.
- 8. I add all my testes one by one inside the csv file, i found few issues which are inside the csv file and i add the test that are passed inside it

Attachments and Resources

A	B	C	D	E	F	G
Test Case ID	Description	Steps	Expected Result	Actual Result	Status	Remarks
